

Lot # XXXXX

BostonBiochem

MATERIAL DATA SHEET

Human Pan-SUMO, Monoclonal Antibody Cat. # A-714

Small Ubiquitin-like Modifiers (SUMOs) are a family of small, related proteins that can be enzymatically attached to a target protein by a post-translational modification process termed SUMOylation. Unlike ubiquitination which targets proteins for degradation, SUMOylation participates in a number of cellular processes, such as nuclear transport, transcriptional regulation, apoptosis, and protein stability. All human SUMO proteins share a conserved ubiquitin-like domain and a C-terminal diglycine cleavage/attachment site. Human SUMO1, SUMO2, SUMO3, and SUMO4 are all translated as propeptides, containing C-terminal prosegments following the diglycine motif that marks the end of the mature forms. Following prosegment cleavage, SUMO1, 2, and 3 may then be enzymatically attached to a lysine on a target protein. It is not clear whether SUMO4 is processed in a similar fashion.

Product Information

Quantity:	100 µg
Source:	Monoclonal Rat IgG _{2A} Clone # 852721
Antigen:	Purified, recombinant human SUMO2. Accession Number P61956
Purification:	Protein G purified from hybridoma culture supernatant
Stock:	0.5 mg/mL in PBS, pH 7.4, 50% glycerol, 0.09% sodium azide

Use & Storage

Specificity:	This antibody detects endogenous, human SUMOylated proteins in Western blots, and has similar sensitivity when tested against purified, recombinant SUMO1, SUMO2, SUMO3 and SUMO4.
Use:	Recommended concentration for Western Blot is 0.1 - 0.5 µg/ml.
Storage:	Store at -20°C.

Sample Western Blot Data

10-40 ng of recombinant pro-SUMO proteins were separated on a reducing 10-20% SDS-PAGE gel. Western blots were developed using PVDF membranes and α -Pan-SUMO (A-714) mAb primary at 0.5 μ g/ml followed by HRP-labeled anti-rat (R&D Systems # HAF008) secondary antibody at 1:2000 dilution. A-714 staining of all four SUMO types was observed.
