

Lot XXXXX

## MATERIAL DATA SHEET

### Tau K18/Tau PHF Core, *human recombinant* Cat. SP-496

Tau is a microtubule-associated protein expressed primarily in neurons. Carboxy-terminal domains of Tau associate with and stabilize microtubule structure, while other domains bind to the plasma membrane. Abnormal Tau phosphorylation can result in the self-assembly of tangles of paired helical and/or straight filaments, which are involved in the pathogenesis of Alzheimer's disease and other neurodegenerative diseases. Properly folded Tau is highly soluble, but when the protein becomes misfolded it forms insoluble aggregates that can damage cytoplasmic functions, interfere with axonal transport and ultimately lead to cell death. This recombinant protein is untagged and consists of amino acids 243-372 of UniProt # P10636-8.

#### Product Information

<b>Quantity:</b>	100 µg
<b>Stock:</b>	X mg/ml (X µM) in PBS pH 7.4
<b>MW:</b>	14 kDa
<b>Purity:</b>	> 95 % by SDS-PAGE under reducing conditions and visualized by Colloidal Coomassie Blue Stain.

#### Use & Storage

<b>Use:</b>	Concentrations for <i>in vitro</i> assays will depend on experimental conditions and detection methods.
<b>Storage:</b>	Store at -80°C. Avoid multiple freeze/thaw cycles.

#### Literature
