## MATERIAL DATA SHEET

### **His<sub>6</sub>-Ubiquitin Mutant K27R, *human recombinant*** **Cat. # UM-HK27R**

Mutation of lysine 27 to arginine renders ubiquitin (Ub) unable to form poly-Ub chains via lysine 27 linkages with other Ub molecules. Ub K27R can form an E1-catalyzed active thioester at the C-terminus allowing the molecule to be transferred to the lysines of substrate proteins. Ideal for the reduction in poly-Ub chain length/conjugation rates and determining if polyUb chains are K27 linked.
