

E3 Ligase Activity Kits

E3 Ubiquitination kits are designed for monitoring E3 ligase activity *in vitro* by the ubiquitination of relevant protein substrates. All needed components for E3 ligase auto- and substrate protein- ubiquitination are supplied in addition to detailed protocols.

- Monitor E1, E2, and E3 ligase activities
- Measure E3 ligase auto-ubiquitination
- Quantitate E3 ligase substrate ubiquitination
- Produce ubiquitinated substrate products
- Native or control protein substrates provided
- Fully-characterized E3 enzymes

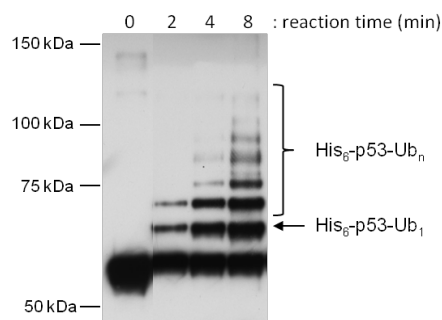

Figure 1: Ubiquitination of p53 by the MDM2 E3 ligase with kit K-200B
